

What are Mongolia's Energy goals?

The government of Mongolia has set targets to increase the share of generation capacity from renewable energy sources to 20% by 2023 and 30% by 2030, and to build export-oriented power plants.

What type of energy is used in Mongolia?

In Mongolia, total primary energy supplies continue to be dominated by coal, and electricity generation is largely provided by coal-fired power plants, particularly combined heat and power plants. In 2018, 93% of all electricity was produced by thermal power plants, and 98% of all district heat was provided by coal-fired systems.

Could a natural gas pipeline pass through Mongolia?

In the future, if a natural gas pipeline route passes through Mongolia, a fuel shift from coal-to-gas could be a positive influence for reduction of air pollution, as well as helping to address climate change and other environmental issues. Financing

Why does Mongolia import power from Russia and China?

Although Mongolia has abundant resources to produce electricity, it currently lacks sufficient generation capacity to meet its needs, and thus imports power from Russia and China. Power is imported across the northern border to compensate for shortfalls of electricity in the northern central area during winter peak periods.
