Does South Korea have a sulphur emission control area?

Applicability: Ship owners and operators trading to South Korea. From 1 September 2020, the South Korea government will implement mandatory SOx Emission Control Areas (SECAs) requiring the use of 0.1% sulphur fuel by ships in specified port areas. The South Korea government has also released a voluntary speed reduction program in the same ports.

What sulphur fuel should a vessel use in South Korea?

As such, vessels intending to operate in the South Korean SECA should complete the fuel changeover to low sulphur fuel oil (with sulphur content not exceeding 0.10%) before entering this area and will be required to continue using compliant fuel until leaving this area.

How does South Korea transport cargo to Central Asia?

South Korea, an island-like nation divided by the demilitarized zone within the Korean Peninsula, facilitates cargo transportation for Central Asia through a sea-rail combined transportation system (SRTS) between Korea, China, and Russia. This system effectively utilizes the China Railway Express and the trans-Siberian railway.
