

Specifications and standards for overhead installation of photovoltaic panels

What are the standards for photovoltaics?

There are numerous national and international bodies that set standards for photovoltaics. There are standards for nearly every stage of the PV life cycle, including materials and processes used in the production of PV panels, testing methodologies, performance standards, and design and installation guidelines.

What is a photovoltaic solar system code section?

This collection of provisions imports code sections which address Photovoltaic Solar Systems, and the structural, fire safety and energy conservation measures for them. These are specific to Solar Systems.

What are IEC standards in photovoltaics?

IEC standards in photovoltaics were developed by TC82 "Solar photovoltaic energy systems". The U.S technical advisory group (USTAG) feeds the input to IEC TC82 standards time to time. Both IEC and American Society of Testing and Materials (ASTM) International had published numerous PV standards in which many are similar and redundant.

What are the IEC PV standards?

The IEC PV standards comprise IEC technical committee 82 solar PV Energy System (IEC TC82) which develops and adopts all Photovoltaic related standards. There are nearly 80 standards applicable to photovoltaic and five working groups in IEC TC82.

How much weight does a PV system add to a roof?

A conventional PV system that includes racking materials will add approximately 6 pounds per square foot of dead load to the roof or structure, though actual weights can vary for different types of systems. Wind will add live loads; the magnitude of live loads will depend on the geographic region and the final PV system.

What are the standards for flat plate PV modules?

Standards for flat plate PV modules - covers rack mounting systems, clamping devices, mounting grounding/bonding devices for specific flat plate PV panels that comply with the standard for PV UL1703 or UL 61730-1 (describes the fundamental construction requirements for PV modules for safer operation) and UL61730-2 (for safety qualification test).
