

A Grid-Tied system is by far the most common type of residential PV system as well as the simplest and least expensive it connects to the electric utility Grid (CEB or LECO) and uses the grid for storage and backup of solar energy produced by the PV system.

Export the surplus solar power to main electricity grid. No limitation of load, run all connected load with grid sharing. Common type of solar system for larger power consumers. No battery bank, no recurring cost. ROI in 3-5 years, life 25-30 years.
