

What is the most important energy source in Suriname?

The most significant energy source in the country is considered to be hydro-electricity, which was used in 2010 to supply 95% of its electricity generation. Notably, around 26% of Suriname's total energy supply is generated through Lake Brokopondo's hydropower system.

Is Suriname an energy-independent country?

Suriname is highly energy-independent due to the combination of the mining of fossil fuels and the significant wealth of hydropower; thus, energy-wise, it is a very self-sufficient country. After Trinidad & Tobago, and Cuba, Suriname comes in as the 3rd largest oil producer in the Caribbean.

What is the power system in Suriname?

Suriname's power sector consists of a number of individual power systems, of which some are interconnected. In the region of Paramaribo, electric power is supplied by means of: 180MW of hydroelectric power, supplying about 75% of the energy, and 66MW of diesel generation. Suriname's independent power systems are listed below:

How much electricity does Suriname generate?

As of 2020, Suriname's installed electricity capacity was 501 MW, with fossil fuels accounting for nearly 62% and renewables (mostly hydro power) making up the remainder. In 2020, Suriname generated 2.4 TWh of electricity. As of 2018, the peak electrical demand was 215.4 MW and 97% of the population had access to electricity.

Who is responsible for energy projects in Suriname?

The Ministry of Natural Resources is responsible for the government's energy programs and initiatives. Suriname's permitting process is detailed in a report by the Inter-American Development Bank, ESIA (Environmental and Social Impact Assessment for Energy Infrastructure Projects).

What is Suriname's Electricity permitting process?

Suriname's permitting process is detailed in a report by the Inter-American Development Bank, ESIA (Environmental and Social Impact Assessment for Energy Infrastructure Projects).
