Svalbard and Jan Mayen had a population of 2,939 in January 2021. There were 1,542 internet users in January 2021.

Could a new solar project help remote Arctic communities transition to green energy?

Norway has installed the world's northernmost ground solar panels in its Svalbard archipelago, a region plunged in round-the-clock darkness all winter. The pilot project could help remote Arctic communities transition to green energy.

Why do solar panels work in Isfjord Radio?

The solar panels also benefit from the "albedo" effect, the reflective power of snow and ice, as well as low temperatures that improve their efficiency. On the flipside, the region is plunged into total darkness from early October until mid-February, which makes it impossible for Isfjord Radio to completely give up fossil fuels.

Why are solar module prices so volatile?

Alongside growing demand, since the start of 2023, S&P Global said a combination of importation duties, oversupply and supply chain costs have led to significant solar module pricing volatility. The tool will track six different module spot prices, covering differing geographies, megawattage and time periods.

PV Tech has been running PV ModuleTech Conferences since 2017. PV ModuleTech USA, on 17-18 June 2025, will be our fourth PV ModuleTech conference dedicated to the U.S. utility scale solar sector.

Pocono Solar Project. In August of 2010 the 3MW Pocono Solar Project came online after just 3 months of construction. Consisting of nearly 40,000 American made photovoltaic modules covering 25 acres, the project has produced over 50 Million Kilowatt hours as of September 2024 and was originally projected to produce more than 72 million kilowatt hours (kWh) of energy ...

In the last year, some modules have become 25% more expensive, with raw material prices pushing up the cost of the energy transition. An analysis by Rystad Energy suggests that the prices could threaten 50GW of solar developments planned for 2022;" 56% of total planned development. Analysts also point to the 500% rise in shipping costs as a ...

The International Energy Agency (IEA) energy balance methodology is based on the calorific content of the energy commodities and a common unit of account: tonne of oil equivalent (toe). Toe is defined as 107 kilocalories (41.868 gigajoules). This quantity of energy is, within a few per cent, equal to the net heat content of one tonne of crude oil.

The solar panels in the region will benefit from the "albedo effect", where the reflection of sunlight from the ice surface will boost generation. Also, as the panels will remain cooler, the PV efficiency is projected to be ...
