

What is electricity generation in Costa Rica?

Electricity generation in Costa Rica is the responsibility of the Costa Rican Electricity Institute (ICE), created in 1949 to consolidate the nationalization and institutionalization of the country's energy sector and guarantee its management with a long-term vision oriented to the national interest.

What is geothermal power in Costa Rica?

Geothermal power is a natural energy source that provides subterranean heat and power as a byproduct of volcanic energy. Costa Rica has six currently active volcanoes and dozens of inactive volcanoes. Unlike many other forms of renewable energy, geothermal can be continuously generated and is not dependent on weather.

What is Costa Rica's energy policy?

Costa Rica's energy policy aims to move from a fossil fuels based energy system towards renewable energy sources and to expand its power generation capacity, replacing old power generating stations and developing new projects.

Does Costa Rica have an electricity grid?

Only a few countries have developed an electricity grid powered mostly by renewable sources. Surprisingly, Costa Rica is one of them. For years, Costa Rica has relied on clean energy for up to 99% of its electricity, putting it in the league of innovative countries like Iceland, Norway and New Zealand.

What are the main sources of energy in Costa Rica?

While Costa Rica's largest source of energy is hydroelectricity, other sources include geothermal energy, biomass, solar power, and wind power. The commercial consumption of energy in Costa Rica has tripled from 1980 to 2009. The electricity consumption has increased by 4.2 times due to a high level of electrification.

Are there private energy companies in Costa Rica?

Though there are a few large private energy companies in Costa Rica, most primarily generate power to sell to ICE. Consorcio Nacional de Empresas de Electrificación de Costa Rica (Conelectricas), formed in 1989, is a union that aims to develop hydroelectric projects.

Another goal for Costa Rica is to diversify its electricity mix, in order to reduce dependencies on hydropower during increasingly strong dry seasons. This study aims to complement these efforts and show pathways to 100% RE in order to meet the decarbonisation challenge. Costa Rica's abundant renewable energy resources
