

What is the Swedish energy system?

The Swedish energy system can be divided into supply, transformation, and consumption of energy. The energy system consists of supplied energy in the form of primary energy that is converted and transferred to the final energy users. The energy system is always in balance. This means energy input is always equal to the energy use, including losses.

What is an example of a flow of energy in Sweden?

Losses and non energy use. Energy flows within the Swedish energy system are presented in the Sankey diagram. An example of a flow in the diagram is: Supply of energy from wind, water and sun to the energy system. The energy is converted into electricity. The electricity is used in industry, transport, and the residential and service sector.

How does Sweden use energy?

Energy losses in the system can come from conversion and transmission, or that energy commodities are used for other purposes. In Sweden, we make use of our own renewable energy sources such as water, wind, sun, and biomass. We also import nuclear fuel, biofuels, and fossil fuels such as oil and natural gas.

What is Sweden's smart energy ecosystem?

Sweden's Smart Energy ecosystem brings together leading suppliers of smart grids, district heating and cooling, and innovative solutions for energy storage. These key players are on a mission to speed up the transition to clean electricity and carbon neutrality - in Sweden and globally.

What is Sweden's energy plan?

Sweden's energy plan is to have 65% of energy produced by renewables by 2030 and 100% by 2040. Renewable energy includes wind, solar, biomass and geothermal energy sources.

Why should you invest in Sweden's smart energy ecosystem?

Five key strengths of Sweden's Smart Energy ecosystem: Renewable energy is expected to account for 80 per cent of global growth in electricity demand by 2030. Sweden is at the forefront of progress and offers a wealth of opportunities for foreign investors.
