In most urban centers in Tanzania, few households are served with central sewerage system. The greater proportion of the population relies on on-site sewerage disposal systems. In Tanzania about 90% of the urban population depend on on-site sanitation systems: pit latrines (80%) and septic tanks (10%) as their excreta disposal facility.

systems that can effectively deliver improved seed and support the implementation of the G8 New Alliance for Food Security and Nutrition policy commitments, ultimately building lasting business and legal capacity in Tanzania's seed sector that can support dynamic and inclusive growth. Background In Tanzania, many farmers continue to lack
