

The Netherlands utomodeck solar panel

Where can solar panels be installed in the Netherlands?

We're developing opportunities for innovative solar panels in facades, roofs and in windows. Go directly to: There is a total of some 2,200 square kilometres of facade area in the Netherlands, of which 660 square kilometres are suitable for solar energy generation. Altogether, a capacity of 58 gigawatt peak can be installed on it.

Are solar panels a good choice in the Netherlands?

The Netherlands has some 800 square kilometres of roofs free for solar panels, half of which are commercial properties or agricultural roofs. But not all roofs are suitable. Also, the weight of standard solar panels is often too high for the load-bearing capacity of the roof, or the panels are not desirable from an aesthetic point of view.

What are the different types of solar panels in the Netherlands?

There are three main types of solar panels you can get in the Netherlands: monocrystalline panels, polycrystalline panels, and thin film panels. Monocrystalline panels are made using silicon and have an aluminium frame. These panels are more efficient in producing electricity from sunlight because of the structure of the cells.
