

The current status of the development of microgrids in my country

Why are microgrids becoming more popular in the United States?

Microgrids have become increasingly popular in the United States. About 34% of the world's microgrid projects are located in the United States and North America area -- drivers for this fast growth could include the country's aging electricity megagrid and end-use customers' increasing desire for greater security and reliability .

What is the future development direction of microgrids in China?

The future development direction of microgrids in China will therefore be towards an energy system that integrates electricity, gas, water, and heat resources, achieves mutual coupling, and solves the problems of efficient energy utilization and peak regulation .

Where did research on Microgrid technology start?

Research on microgrid technologies started relatively late in China. Compared with the huge research teams composed of research institutions, manufacturers and power companies in developed countries and regions such as Europe, the United States, and Japan, there is still a big gap in research strength and research results in China.

Are microgrids the future of energy?
