... IEC 61850 is vulnerable to a number of attacks, including password cracking, Denial of Service (DoS), and eavesdropping [12]. Similarly ...

In order for the PLC program to work with IEC 61850, we need to pass the values of the IEC 61850 data attributes to the PLC program so that it can execute its logic. Thus, to achieve IEC 61850 support, the values of the IEC 61850 data attributes is passed to the PLC program and vice versa by reading from/writing into these arrays.

Three of the main standards that are especially needed for smart grid and protection automation are the IEC 61850 series, the IEC 61970 and the IEC 61968 series (Andren et al., 2013, Buchholz et al., 2010). A closer look at these three standards is given in the following chapters to show the basic concepts and the different approaches that they ...
