

Trinidad and Tobago is a small island developing state (SIDS) with one of the largest emitters of CO₂ per capita globally - linked to a reliance on oil and gas. With the country's commitment to sustainable development goals and climate change agreements, rapid redesign of the national power sector is critical to promoting a sustainable energy transition.

Divert gas from domestic electricity generation through energy efficiency and renewable energy. In Trinidad & Tobago, almost 100% of electricity is generated using natural gas. Because natural gas is in such short supply at the moment (compared to demand), the national priority must be to use the gas in activities which generate the most amount ...
