

Utility-scale batteries can revolutionize how we harness renewable power. Coupled with wind and solar, these batteries could increase the reliability of green energy by storing excess energy during times of high generation and low demand. Then, utilities can tap the stored energy when demand increases.

The World Bank Group has approved plans to develop Botswana's first utility-scale battery energy storage system (BESS) with 50MW output and 200MWh storage capacity. The World Bank will support the 4-hour duration BESS via a loan of US\$88 million. It will also receive a US\$30 million loan and a US\$4 million grant from the Green Climate Fund ...
