

What is the Tuvalu energy project?

The project will help the Government of Tuvalu expand access to modern energy services; improve service quality, reliability, and climate resilience; reduce reliance on fossil fuels for power generation; and reduce the cost of generation. The project will decrease the supply cost by partially replacing diesel power with solar power.

Where is Tuvalu located?

Tuvalu is an island country in the Polynesian region of Oceania surrounded by the Pacific Ocean and located midway between Hawaii and Australia. The country neighbours the islands of Santa Cruz, Nauru, Kiribati, Tokelau, Samoa, Wallis and Futuna, and Fiji. Temperatures in Tuvalu vary between 26.0 and 32.0 degrees Celsius.

How does sea level affect Tuvalu?

Tuvalu is affected by an increase in sea levels, which pollute sources of groundwater due to the intrusion of saltwater. The rising sea levels are causing the inundation of low-lying areas, and the intrusion of salt water into the soil is also creating soil porosity, which destroys crops and yields.

When does Tuvalu start implementing TNA?

Tuvalu is starting on its TNA process in 2020 as part of the TNA IV project, at which point it will start deciding its priority sectors and technologies for both mitigation and adaptation. Tuvalu is an island country in the Polynesian region of Oceania surrounded by the Pacific Ocean and located midway between Hawaii and Australia.
