inverters have warranties ranging from anywhere between 5 and 10 years, though some can be extended to 25 years.

The role of an inverter is to turn the DC from solar panel arrays or batteries into usable AC. There are three main types of solar inverters used in solar installations today: String inverters; Power optimizers/inverters; Micro ...

Inverters are the "heart" of every PV system. Their main task is to convert the direct current (DC) from the solar panels into alternate current (AC) that can be used by loads onsite and be exported to the electric grid. Inverters also regulate frequency and voltage, and, in almost all cases, gather production data from the system, and make it available on the internet.
