How much solar power will Turkey produce in 2022?

Ember says there is technical potential for 120 GW of rooftop solar, almost 10 times 2023 capacity, which they say could generate 45% of the country's 2022 demand. Turkey has a sunny climate, ideal for producing solar power.

When did solar water heating start in Turkey?

Solar water heating has been commonplace in Turkey since the 1970s, but the first licences for solar electricity generation were not granted until 2014. Fatih Birol, executive director of the International Energy Agency (IEA), said that in 2021 less than 3% of solar potential was being used.

Does Turkey have a high solar energy potential?

Solar potential is highest in the south-east, and high-voltage DC transmission to Istanbul has been suggested. Turkey's sunny climate possesses a high solar energy potential, specifically in the South Eastern Anatolia and Mediterranean regions.

Will solar power increase in 2035?

Türkiye's National Energy Plan predicts that solar will account for 28% of total installed generation capacity in 2035 and energy storage systems will reach 7.5 GW of installed capacity by that date. The plan assumes installed solar capacity will increase by 3 GW per year to 2030, rising to 4 GW per year from 2030 to 2035.

Is the next big step for PV Manufacturing in Türkiye?

The company also plans to produce its own wafers in the near future. Elin Energy brand Sirius and Schmid Penkintas are pursuing domestic cell and wafer production ambitions too. Onshoring these key stages in the solar module supply chain looks like the next big step for PV manufacturing in Türkiye.

What is Turkey's first solar power tower?

Turkey's first solar power tower, the Greenway CSP Mersin Solar Tower Plant in Mersin, was constructed in 2013 and has an installed power of 5 MW. A solar updraft tower has been suggested for Antalya Province.
