

Do IEA islands need resilient power systems?

Islands need resilient power systems more than ever. Clean energy can deliver - Analysis - IEA Islands need resilient power systems more than ever.

Could distributed energy resources boost the deployment of renewables on islands?

Distributed energy resources - or small-scale energy resources that are usually situated near sites of electricity use, such as rooftop solar - could play an important role in boosting the deployment of renewables on islands, increasing the security, resilience and affordability of power systems while accelerating decarbonisation.

Why do small islands need a new energy infrastructure?

Islands - including those that make up the group known as Small Island Developing States (SIDS) - also need to upgrade their energy infrastructure so that it is resilient to higher temperatures, more frequent natural disasters and flooding related to rising sea levels.

What is Block Island's energy plan?

Block Island, Rhode Island is looking to identify renewable energy sources that can be used to generate electricity on the island and reduce reliance on imported electricity and fuels. The community will engage in energy planning to shore up its resilience, particularly in the face of sea-level rise.

Why do small islands need electricity?

Electricity systems on small islands are frequently over-sized, with high reserve power generation capacity and ancillary services needed locally to respond to daily and seasonal fluctuations, such as changes in demand resulting from high and low tourist seasons.

What is the energy transitions initiative?

Discover more tools and initiatives from the Energy Transitions Initiative. The Energy Transitions Initiative's island energy snapshots highlight the energy landscape of islands in the Caribbean, the Pacific, and the surrounding areas, which have some of the world's highest electricity prices in the world.
