ATEC BVI facilitates the transition to renewable energy in the British Virgin Islands and the wider Caribbean region. We are local leaders and pioneers in the development of the micro-grid energy production field.

From its initial start as private/public autonomous and individual producers of electricity, the government owned public electricity supply was established in the 1950's. At that time, the BVI's main source of electricity was produced by one 20 KW generator, which provided six hours of service per day and supplied 63 consumers between Government house and...

TY - GEN. T1 - Energy Snapshot - British Virgin Islands. AU - NREL, null. PY - 2020. Y1 - 2020. N2 - This profile provides a snapshot of the energy landscape of the British Virgin Islands (BVI), one of three sets of the Virgin Island territories in an archipelago making up the northern portion of the Lesser Antilles.

As of 2022, the electricity consumption in the British Virgin Islands is heavily reliant on fossil fuels, with 100% of its electricity being generated from these sources. This complete dependency on fossil energy means that there is currently no contribution from clean energy sources such as nuclear, wind, or solar ch reliance on fossil fuels not only contributes to climate change ...
