

How is energy regulated in the UAE?

Under the UAE's constitution, individual emirates have autonomy in management and regulation of energy and resources. To date, only a few energy regulations have been federalised, such as the phase-out of incandescent light bulbs and inefficient air-conditioning units through the Emirates Authority for Standardization and Metrology.

Which industries emit the most electricity in the UAE?

Total power generation demand and resulting emissions in the UAE (1985-2019) The three main emitting industries in the UAE are aluminium, steel and cement (Fig. S3 in the online Supplementary Data shows their activity levels). For EII, data were not available from UAE sources.

What is the energy mix in the UAE?

Currently, the UAE's primary energy mix is almost exclusively natural gas (71%) and oil including bunker fuels (28%), with gas accounting for nearly 100% of power generation. Outside power and water heating, renewable energy is at the pilot or early stages.

Does the UAE have a water and energy nexus?

A 2021 study examining the policies related to the water, energy and food nexus of the UAE conducted a stakeholder analysis that included 30 representatives from federal, governmental and non-governmental entities. The analysis encompassed six policies, two of which were related to energy.

Why is electricity demand so high in the UAE?

Electricity demand in the UAE exhibits a strongly sea-sonal effect due to the changes in ambient temperature and humidity. The primary electricity loads in the UAE are cooling, lighting, refrigeration and other appliance loads.

Is UAE's energy mix climate friendly?

While some indicators do show positive trends, this energy mix produces a lot of GHG emissions and is not climate-friendly. Per capita CO₂ emissions in the UAE boomed in the late 1960s, reaching a high of 100 tonnes in 1969. They have since been decreasing but are still among the top 10 highest in the world at 21.8 t per capita in 2021.
