

How do you install a PV inverter?

Use wire ferrules for the PV string conductors if they are stranded wire. Insert the conduit fitting into the opening for the PV connection and tighten it from the inside using the counter nut. Route the PV conductors through the conduit fitting and into the inverter. Secure the PV conductors in place into the inverter inputs.

What is a Growatt series photovoltaic inverter?

Require to order extra if you need it. Growatt series photovoltaic inverters are used to convert the direct current generated by photovoltaic panels into alternating current, and send it to the grid in a three-phase manner.

How do I connect a battery to a solar inverter?

If equipped, turn on the DC breaker between battery and inverter first. Turn on the BAT breaker located in the cable box of the inverter and then power on the battery system. Make sure the PV voltages of the strings are within operating parameters. Turn on PV isolator switches between the inverter and array and then on the side of the inverter.

How many MPPTs can a PV inverter use?

The suggested PV power input into the device for it to utilize the full 18kW of PV that it can process. The inverter has three MPPTs. For MPPT-1, users can connect two strings. For MPPT-2 and MPPT-3, users can connect one string. Strings for MPPT-1 must match one another.

How do I Power my inverter?

Power on the load breakers in the cable box of the inverter and then in the load panel. Danger! Never disconnect the battery, PV, or AC input power under load. If there is an emergency and users must shut down the inverter, please follow the steps outlined below.

How do I set up a parallel inverter?

Keep all the settings the same for each inverter in the parallel system on the LCD or remote monitor! If equipped, turn on the DC breaker between battery and inverter first. Turn on the BAT breaker located in the cable box of the inverter and then power on the battery system. Make sure the PV voltages of the strings are within operating parameters.
