Emergency power supply is a key driver behind the adoption of stationary diesel generators. They become vital in locations demanding uninterrupted power, such as hospitals, universities, laboratories, data centers, industrial facilities, ...

During the day, power is in demand and electricity prices are high. At night, power is not in demand and electricity prices are low. Pumped storage power plants purchase power at night to pump water up to the upper reservoir, they then generate power and sell it back to the grid during the day, when the demand -and price- is higher. Example 1

Using off-grid solar storage systems allows you to have all the convenience that electricity offers without having to run power lines out to a remote property that may be prone to outages. Solar panels first convert solar energy or sunlight into DC power using what is known as the photovoltaic (PV) effect.
