

Does wampac have cyber security?

One such circumstance is a widespread compromise of WAMPAC data for which there is no reliable method of detecting that a compromise has occurred. Achievement of cyber security for WAMPAC will depend upon a full understanding of such circumstances and their mitigation.

What does wampac stand for?

The team framed the initial query as follows: Device that provides data for wide area protection, monitoring and control (WAMPAC) The device might be a digital fault recorder (DFR), a phasor measurement unit (PMU) or a protective relay.

What are the properties of the wampac system?

A few properties of the WAMPAC system are shown in Figure 1: WAMPAC Concept. The blue dots in this figure represent measurement points. The callouts represent waveforms sampled synchronously using GPS reference clock and used to calculate synchrophasors, sent to a connecting network.

Why do we need an out-of-step function in wampac system?

Incorporating an out-of-step function in WAMPAC system enables the monitoring of angle stability and reaction and triggering of protection functions in real time based on that information, , , . These kind of enhanced protection functions help avoiding cascade disturbances and achieve adaptability in the transmission system .

What is penetration testing of wampac solutions for cyber security vulnerabilities?

Penetration testing of WAMPAC solutions for cyber security vulnerability is currently ad-hoc and needs to be fully specified to reflect test scenarios, test methods, test plans, and the metrics for test performance assessment. Identify cyber security vulnerabilities of WAMPAC solutions. This includes software and hardware vulnerabilities.

How can wampac standards be harmonised?

Standards developing organizations, such as IEEE and IEC that are involved in the development of WAMPAC standards could use the discussion of end-to-end requirements to further harmonize the standards. Particularly useful would be incorporating or referencing a common and comprehensive set of cybersecurity requirements.
