Why is China's power grid creaking?

China's creaking grid represents a major constraint to progress on its green energy transition. During the first four months of this year alone, China invested Rmb122.9bn (\$17bn) in its power grid projects, a 24.9 per cent year-on-year increase.

How much money did China invest in power grid projects?

During the first four months of this year alone, China invested Rmb122.9bn (\$17bn) in its power grid projects, a 24.9 per cent year-on-year increase. That compares with the \$3.5bn announced last October by US President Joe Biden's administration, which covers 58 projects across 44 states.

Will China build a global power grid?

The technology acts as a key component in China's proposal to build a global power grid, known as the Global Energy Interconnection. The idea - announced by China's president Xi Jinping at a United Nations summit in 2015 - is to link up national grids over the next three decades.

Why is China building a UHV power grid?

State Grid is also building a world-leading set of ultrahigh-voltage AC lines, to help eastern China's regional AC grids absorb the output from those massive lines. "The UHV AC power grid is like a deep-water port, and the UHV DC is like a 10,000-ton ship.

PolyU and China Southern Power Grid Company Limited (CSG) have joined forces to establish the Joint Institute for Green and Secure Power Grid. It will take forward the development of the country's new power systems initiative.
