

# What are the general specifications for installing photovoltaic panels

What are photovoltaic panels?

Photovoltaic (PV) panels are devices that convert sunlight into electrical energy using semiconductor materials. This process is known as the photovoltaic effect. PV panels are an essential component of solar power systems and are increasingly being deployed for both residential and large-scale power generation purposes.

Should a general contractor install a solar PV system?

A general contractor may face a choice between using an electrical subcontractor or a solar subcontractor to install the PV system. A good solar contractor will have the expertise in solar PV systems plus qualified electricians on staff.

What should a builder consider when designing a PV system?

**PV Modules and the Building Design** - The builder or PV designer must also consider the PV system and the building as a system. The PV array should be located considering the aesthetics of the building. As well, the modules must be located so that building features such as gables and overhangs do not shade the modules.

What should be included in a solar PV system diagram?

The diagram should have sufficient detail to clearly identify: Figure 10: 70-Amp Double Pole Breaker. Figure 11: Site/System Diagram. The diagram should include: array breaker for use by the location, size, orientation, conduit size and location and balance of system solar PV system. component locations.

Who is required to install a solar PV system?

All installation work must be performed by accredited CEC installers and documentation proving such accreditation must be submitted to the University. Electrical design of the system must be completed and signed off by an accredited solar PV designer accredited with the CEC.

Do I need to meter a photovoltaic system?

It is assumed that aluminum framed photovoltaic (PV) panels mounted on a "post" and rail mounting system, the most common in the industry today, will be installed by the homeowner. While metering the system is encouraged, the specification does not address system wiring elements for associated system sensors or monitoring equipment.
