What is a battery energy storage system?

While consumers often think of batteries as small cylinders that power their devices, large-scale battery storage installations known as battery energy storage systems (BESS) can rival some pumped hydro storage facilities in power capacity.

What is an energy storage system?

An energy storage system (ESS) for electricity generation uses electricity (or some other energy source, such as solar-thermal energy) to charge an energy storage system or device, which is discharged to supply (generate) electricity when needed at desired levels and quality. ESSs provide a variety of services to support electric power grids.

What are energy storage technologies?

Energy storage technologies have the potential to reduce energy waste, ensure reliable energy access, and build a more balanced energy system. Over the last few decades, advancements in efficiency, cost, and capacity have made electrical and mechanical energy storage devices more affordable and accessible.

What is thermal energy storage?

Thermal energy storage (TES) can be found at solar-thermal electric power plants that use concentrating solar power (CSP) systems. Such systems use concentrated sunlight to heat fluid, such as water or molten salt. While steam from the fluid can be used to produce electricity immediately, the fluid can also be stored in tanks for later use.

How does energy storage work?

The so-called battery "charges" when power is used to pump water from a lower reservoir to a higher reservoir. The energy storage system "discharges" power when water, pulled by gravity, is released back to the lower-elevation reservoir and passes through a turbine along the way.

What are examples of energy storage systems?

Examples of chemical energy storage systems include batteries, flow batteries, and fuel cells. Mechanical (kinetic and potential) energy storage systems include pumped storage hydropower, flywheels, and pressurized gas storage systems. Thermal energy can be stored as a molten salt and is also mainly used for large-scale systems.
