

Wind Power Wind Power Generation Question Bank

What are the advantages and disadvantages of wind energy?

Advantages: Renewable: Wind energy is inexhaustible and will not deplete with use. Clean and Green: Wind energy produces no greenhouse gas emissions or air pollutants, contributing to a cleaner environment. Energy Independence: Countries with ample wind resources can reduce their reliance on fossil fuels and achieve greater energy security.

Does increasing wind speed increase power?

In fact, increasing the wind speed by 25% will cause the power available to increase by over 80%. () Although most older turbines and other devices that convert wind energy to electricity have not attained aerodynamic efficiencies greater than 50%, modern designs produced since the early 2000s have reached as much as 65% efficiency.

What is the power efficiency of a wind rotor?

The dependence of the available energy on the speed of the wind inflow is quite pronounced. 3. False. From elementary momentum theory, it can be shown that the power efficiency of a rotor cannot surpass 59.3%, i.e., the Betz limit. The highest experimental efficiencies for even the most advanced wind energy systems are around 50%.

How does a wind turbine turn wind energy into electricity?

Explanation: A wind turbine turns wind energy into electricity using the aerodynamic force from the rotor blades, which work like an airplane wing or helicopter rotor blade. When wind flows across the blade, the air pressure on one side of the blade decreases.

What happens if the speed of a wind stream remains unchanged?

If the speed of a wind stream remains unchanged while passing through the rotor, then a large power will be generated. Zero power will be generated. The flow is known as stalled flow. The speed of the rotor will be extremely high. Option 2 : Zero power will be generated. Explanation:

How does a GE wind turbine blade work?

The following photograph shows the inner portion of the blade of a GE wind turbine. As shown, the blade is equipped with a device conceived to delay flow separation, thereby preventing stall and improving aerodynamic performance. The device in question is an aileron, a series of vortex generators, a set of pressure taps.

1 Elucidate the wind energy characteristics. 12M 2 Elaborate the factors of a site selection for installing wind turbines. 12M 3 Classify wind energy conversion systems and explain. 12M 4 a ...

Wind Power Wind Power Generation Question Bank

Wind energy is a renewable and sustainable form of energy that harnesses the power of the wind to generate electricity. It is one of the fastest-growing sources of clean energy globally and has significant potential to ...
