

Wind power double-fed power generation leader

Is double fed induction generator suitable for grid-connected wind energy conversion system?

This paper presents the control strategies and performance analysis of doubly fed induction generator (DFIG) for grid-connected wind energy conversion system (WECS). The wind power produces environmentally sustainable electricity and helps to meet national energy demand as the amounts of non-renewable resources are declining.

Are adjustable speed generators for wind turbines based on doubly fed induction machines?

Adjustable speed generators for wind turbines based on doubly fed induction machines and 4-quadrant IGBT converters linked to the rotor Proceedings of the 2000 Industry Applications Conference, vol. 4, 8-12 October (2000), pp. 2249 - 2254 A novel control strategy for the rotor side control of a doubly-fed induction machine

Can a double-fed induction generator generate variable speed wind power?

With recent developments in power electronic converters, variable speed generation looks entirely feasible and cost effective. The paper characterizes the performance of a double-fed induction generator (DFIG) for variable speed wind power generation.

Can a doubly fed generator operate under variable speed operation?

A complete simulation model is developed for the control of the active and reactive powers of the doubly fed generator under variable speed operation. Several studies are performed to test its operation under different wind conditions.

What is DFIG wind turbine active power control?

The DFIG wind turbine active power control is achieved by the convenient control of the rotor voltage. It is significantly the improved performance of the wind turbine system. The proposed method of the feedback controller for the DFIG wind turbine is obtained by the maximum power.

What is a DFIG wind turbine rotor?

The DFIG is currently the system of choice for multi-MW wind turbines. The aerodynamic system must be capable of operating over a wide wind speed range in order to achieve optimum aerodynamic efficiency by tracking the optimum tip-speed ratio. Therefore, the generator's rotor must be able to operate at a variable rotational speed.

This paper investigates the impact of power grid strength and phase-locked loop (PLL) parameters on small signal stability of grid-connected doubly fed induction generator (DFIG) ...

DOI: 10.1016/0960-1481(95)00096-6 Corpus ID: 110586132; Novel control strategies for variable-speed doubly fed wind power generation systems @article{Spe1995NovelCS, title={Novel ...

High penetration level of wind power generation in the interconnected electrical network and the increasing rated power of the wind energy converter units imposes new ...

This paper proposes a second-order active disturbance rejection control (ADRC)-based control strategy with an integrated design of the flux damping method, for the fault ride ...

2012 20th Mediterranean Conference on Control & Automation (MED) Barcelona, Spain, July 3-6, 2012
Power analysis in wind generation with doubly fed induction generator with polynomial ...

Modelling & Simulation of a Wind Turbine with Doubly-Fed Induction Generator (DFIG) ... The European leaders signed up in March 2007 to ... wind turbine and to control its ...

topography and wind regime, the amount of installed power in wind turbines performs more than 30% of the local energy consumption [1]. Furthermore, today's average wind generat-ing unity ...

Wind energy is a kind of inexhaustible and sustainable renewable clean energy. Therefore, wind power generation has attracted worldwide attention, attracting many scholars and experts at ...

One of the most efficient and famous methods in renewable energy is wind power generation. Due to variable wind speed, the double fed induction generator (DFIG) is used in wind ...

where T_m is the wind turbine mechanical torque, ρ is the air density, D is the turbine rotor diameter, C_p is the wind turbine power coefficient, U_W is the wind speed and σ_t ...
