

What's new in solar-driven interfacial water evaporation?

Recent progress in solar-driven interfacial water evaporation: advanced designs and applications. Nano Energy 57, 507-518 (2019). Zhang, Y. et al. Hierarchically structured black gold film with ultrahigh porosity for solar steam generation.

What is a high-efficiency solar desalination evaporator composite?

A high-efficiency solar desalination evaporator composite of corn stalk, MCMs and TiO₂: ultra-fast capillary water moisture transportation and porous bio-tissue multi-layer filtration. J. Mater.

Can a single solar array be used in China?

At present, relevant technical research is also being conducted in China. However, considering that the power demand is above the megawatts level, it is not reasonable to use a single solar array to realize this function.

Can indoor organic photovoltaics power the Internet of Things (IoT)?

Indoor organic photovoltaics (IOPVs) are one of promising candidates for transferring artificial illumination to power the Internet of Things (IoT). However, their power conversion efficiencies (PCE) are limited by the fact that only a few efficient non-fullerene acceptors are available for IOPVs.

Does a biomimetic 3D evaporator have solar desalination capability?

High salinity, 25.0 wt% of sodium chloride (NaCl) solution, is prepared as the representative brine sample to demonstrate the solar desalination capability and durability of the biomimetic 3D evaporator. The desalination process is recorded by a camera.

How did Xiao et al use a blade coated perovskite layer?

Xiao et al. blade coated high-quality, wide-bandgap perovskite layers by tuning the cesium concentration in a mixed solvent system. They avoided diffusion between the perovskite layers with a tin oxide layer grown by atomic layer deposition that also served as an electron extractor.

Comparisons of solar steam efficiency of the 3D flower-like film with other 2D solar steam systems; additional FTIR of the cellulose film and the magnetic film; procedure of stirring ...

The momentum and energy multiband alignments promoted by Pb alloying resulted in an ultrahigh power factor of $\sim 75 \text{ mW cm}^{-1} \text{ K}^{-2}$ at 300 K, and an average figure of merit ZT of ~ 1.90 . We ...

1.2.2 Disadvantages of solar energy electrical generation 16 1.2.3 Types of solar energy electrical generation 17 1.2.3.1 Concentrator solar power generation 17 1.2.3.1.1 Solar trough thermal ...

Tandem solar cells can boost efficiency by using a wider range of the solar spectrum. The bandgap of organic semiconductors can be tuned over a wide range, but, for a two-terminal device that directly connects the cells, the ...

Department of Mechanical Science and Engineering; Xiao Yan; ... this enhancement equates to an additional electrical power generation of 1000 TWh annually, or 83% of the global solar ...

(E) Power generation comparison between the old TEG and the recycled new TEG. (F) Lego-like reconfiguration of two separate TEGs (devices I and II) into a new functional TEG (device III). The new TEG (device III) is in ...
