## Xiao New Energy Photovoltaic Panel Policy

Are China's policies on photovoltaic power generation consistent?

OLAR PRO.

The results show that changes in the degree of synergy between policy goals and measures tend to be consistent and that China's policies on photovoltaic power generation have gradually shifted to the combined use of different policy measures.

Why is Xi Jinping limiting solar PV development in China?

President Xi Jinping's announcement in 2020 of China's commitment to peak carbon emissions by 2030 and achieve carbon neutrality by 2060 underscores the nation's determination to expand its solar PV capacity. However, the scarcity of land, particularly in developed regions, has emerged as a primary impediment to solar PV development.

Why is China interested in solar photovoltaic technology?

Initially, China prioritized wind power for renewable energy development due to its well-established technology. However, the Key Points of New Energy and Renewable Energy Industry Development Planning 2000-2015, published in 2000, marked the beginning of China's interest in solar photovoltaic technology.

Who formulates policies on photovoltaic power generation?

Nevertheless, policies on photovoltaic power generation have been mainly formulated by a single department: the National Development and Reform Commissionor the National Energy Administration. In addition, as shown in Fig. 1, before 2009, there were no multiple departments formulating or issuing policies without synergy between departments.

What is the capacity of PV & wind power plants in 2021-2060?

In a baseline scenario, the capacity of individual PV and wind power plants is limited to 10 GW without electricity transmission and energy storage, whereas the growth rate of PV and wind power is constant during 2021-2060 without considering the dynamics of learning.

How are photovoltaic power generation policies evaluated?

Initially,the evaluation of photovoltaic power generation policies mainly focused on qualitative evaluations, which revealed existing problems by sorting the types of policies and summarizing the impacts of their implementation (Huo and Zhang, 2012; Grau et al., 2012; Zhang et al., 2014; Yang and Zhao, 2018; Gao and Rai, 2019).

In the face of the traditional fossil fuel energy crisis, solar energy stands out as a green, clean, and renewable energy source. Solar photovoltaic tracking technology is an ...
